- **Others:** Microsoft office.

Projects

1. https://github.com/Alaa-Mostafa/Graduation_project.git

-Our graduation project is a detailed website focused on Egypt's Religious Complex area. It provides historical data, a booking system, and e-commerce features to enhance the visitor experience. The site supports multiple languages and includes 3D models of artifacts from the Coptic Museum. Additionally, it features two engaging games for children.

2. https://github.com/Gege-alii/phpcommerce/tree/master

- This PHP-based e-commerce platform is designed for a clothing store and supports both Arabic and English users. It enables account registration, login, product browsing, cart management, and CRUD operations on user accounts. The bilingual interface enhances accessibility for a diverse audience.

3. https://github.com/Gege-alii/phpblog/tree/master

- This PHP native project is a fully functional blog platform that enables users to view posts and images. Registered users can perform CRUD operations on the posts. The application ensures secure user authentication, allowing only logged-in users to manage the content.

4. https://cartshop-eosin.vercel.app

- Website of E-commerce products with the ability of adding them to cart and real Checkout using Angular Components , using : HTML, bootstrap, Typescript, Angular.

5. https://gehanali.github.io/EXAM-YUMMY/

- using an API of food recipes to show it and its ingredients , using : bootstrap, Javascript, API.

6. https://gege-alii.github.io/weather/

- API Weather was used to check the weather conditions of any city for the following 3 days , using: HTML, CSS, bootstrap, Javascript, Weather API.

7. **https://gege-alii.github.io/movie_app/**

- The Movie App uses the Movie Database (TMDb) API to provide movie details and browsing by categories. It includes a responsive image slider for showcasing movie posters and a modern, engaging UI. The app integrates Bootstrap for responsive design and JavaScript for interactive features.

8 . https://products-shop-zmfj.vercel.app/home

- This e-commerce project is a simple online store platform that displays products from the Fake Store API. Users can browse a curated selection of items, specifically focused on categories like "women's clothing with a complete User registration and login functionality using Angular .
